Sathya Sathwik Pushpagiri

+91 7285972050 | pushpagirisathwik@gmail.com | LinkedIn | Portfolio

❖ SUMMARY

Artificial Intelligence & Data Science student with internship experience in Data Science and Python Full Stack Development, skilled in building scalable web applications using Django and modern web technologies, and proficient in data analysis, preprocessing, and visualization using Python libraries like Pandas and NumPy. Experienced in designing and managing database-driven applications with a focus on performance and efficiency, with strong problem-solving abilities and a passion for developing real-world solutions. Motivated to continuously learn new technologies and contribute to innovative, impactful projects while growing as a software and data professional.

❖ SKILLS

Programming Languages: Python, SQL

Web Technologies: HTML, CSS, JavaScript

Frameworks: Django, React Js, Electron Js

Databases: MySQL , PostgreSQL

Data Science & ML Libraries: NumPy, pandas, matplotlib, seaborn, Scipy, Scikit-learn

Tools & Platforms: Git, GitHub, Power BI, Microsoft Excel, REST APIs, Postman, Visual Studio Code

Soft Skills: Clear Communication, Teamwork, Analytical Thinking, Time Management

❖ PROFESSIONAL EXPERIENCE

Full Stack Developer | Green Tech Industries **March 2026 – Present**

- Designed and developed a full stack Inventory Management System with Django, enabling efficient tracking of stock, orders, and user activities across the organization.
- Built an internal real-time chat application to facilitate seamless communication between users,works through LAN.
- Implemented LDAP - based authentication, email integration, and optimized query handling for improved performance.

Data Science Intern | BIST Technologies **June 2025 – July 2025**

- Focused on data cleaning, preprocessing, and statistical analysis using real-world datasets.
- Utilized Python, SQL, and Power BI to perform data visualization, reporting, and extract actionable insights.
- Strengthened problem-solving and analytical skills through hands-on experience with practical data science tasks.

Python Full Stack Intern |Think Champ **July 2024 – October 2024**

- Developed scalable and responsive full stack web applications using Python, Django, and modern front-end technologies, with experience in backend development, database integration, and user-focused design.
- Use SQL databases and the Django framework to build dynamic, database-driven web applications.

❖ EDUCATION

B.Tech: Artificial Intelligence and Data Science **2022 – 2026**

NBKRIST | Vidyanagar, India

❖ Projects

Download File Organizer – Python GitHub

- Developed a Python-based tool to automatically organize downloaded files into folders based on their type.
- Used Python scripting to automatically detect file types, sort them into appropriate folders, without manual effort.
- Made file management simpler and faster by automating file organization, reducing manual effort, improving efficiency.

Library Management System – JavaScript, Django GitHub

- A role-based system for managing library tasks, tracking books, and providing secure access for faculty and students
- Faculty can add, view, and issue books, track issued records, and manage student details efficiently through the system.
- Students can securely view only the books issued to them, ensuring a personalized and restricted access experience while maintaining data privacy and preventing unauthorized access.

Think Spam – Email Spam Detection Using LLM GitHub

- Developed an email spam detection system using LLM(Phi-3 Mini) to analyze and understand email content effectively.
- Integrated Ollama server and Gmail API to fetch, process, and classify incoming emails in real time.
- Generated analytics from emails, allowing users to identify AI-generated spam, other patterns for better understanding.

❖ Certifications

- **Artificial Intelligence Course | Inspire Leap**
- **Python Full stack Course | Think Champ**
- **Critical Thinking and Problem Solving | EDX**
