CAREER OBJECTIVE

Aspiring Backend Developer with a foundation in Python, Flask, REST APIs, SQL, MySQL and JavaScript, seeking an opportunity to contribute to Cognizant as a Java Developer (AWS). Interested in building reliable, secure and scalable backend applications, developing automation solutions, and continuously strengthening skills in Java, cloud-native technologies and modern software engineering practices.

TECHNICAL SKILLS

Programming: Python, SQL, Java
Backend Development: Flask, REST APIs, API Integration
Web Technologies: HTML5, CSS3, JavaScript
Cloud: AWS
Database: MySQL
Development Tools: Git, GitHub, Visual Studio Code
Data & Libraries: NumPy, pandas, matplotlib, seaborn, SciPy
Security & Core: Privacy and Security Fundamentals, Problem Solving, Technical Troubleshooting
Professional Skills: Communication, Teamwork, Analytical Thinking, Adaptability, Time Management

PROFESSIONAL EXPERIENCE

Data Analytics Intern | Aspire Primograd Pvt. Ltd. | June 2025 – July 2025

- Worked with real-world datasets and gained practical experience in data analysis, data cleaning, visualization and database querying.
- Analyzed and interpreted datasets to identify meaningful insights and support data-driven decision-making.
- Applied analytical tools and problem-solving techniques to process data efficiently and deliver practical solutions.

PROJECTS

NOVA AI Intelligence Studio | Flask, JavaScript, MySQL, REST/API Integration

- Developed an AI-powered web application supporting real-time conversations, voice interaction, document analysis and image understanding.
- Built responsive application interfaces using HTML5, CSS3 and JavaScript, with Flask for backend application development and MySQL for data management.
- Integrated AI workflows and API-based functionality to support interactive, maintainable and scalable application features.
- Applied structured backend development and database integration concepts while building and testing application functionality.

Deepflix – AI-Powered Script-Based Movie & OTT Recommendation System

- Developed an AI-driven recommendation system that analyzes complete movie scripts instead of relying only on genre-based metadata.
- Applied NLP, Transformer models and CNN-based semantic embeddings to understand plot structures, emotions and thematic patterns.
- Implemented cosine similarity matching to generate personalized recommendations based on semantic similarity.

EDUCATION

B.Tech – Information Technology | NBKRIST, Vidyanagar, India | 2022 – 2026

CERTIFICATIONS

- Privacy and Security in Online Social Media – NPTEL
- Business Analysis & Process Management – Coursera
- Data Analytics Internship Certification – Aspire Primo Grad

TARGET ROLE ALIGNMENT

Backend development | Python scripting | REST/API integration | SQL/MySQL | Problem solving | Security fundamentals | Application development | Git/GitHub
